## BUDGETWISE AI BASED EXPENSE FORECASTING TOOL

**SUBMITTED BY:**  
SUSHREE MOHANTY

**GUIDED BY:**  
SANGEETHA MAHALINGAM

# ABSTRACT

**BUDGETWISE AI BASED EXPENSE FORECASTING TOOL** is an intelligent personal finance management system that enables users to track expenses, plan budgets, and make informed financial decisions. The system integrates a modern web interface with a machine learning-driven backend to provide real-time insights into spending behaviour. Users can record expenses, view visual summaries, and generate monthly budgets through an interactive dashboard. The application employs statistical models and Random Forest algorithms to predict future expenditures and detect anomalous transactions based on historical data. Additionally, an AI-enabled chatbot offers personalized suggestions to improve financial discipline. Data is securely stored using Firebase Authentication and Firestore, ensuring reliable access and privacy. By combining expense management, predictive analytics, and interactive visualization, it enhances user awareness, supports better financial planning, and promotes healthier budgeting habits.

# PROBLEM — WHY PEOPLE NEED BUDGETWISE

- ❖ Expense tracking is manual and time-consuming.
- ❖ Lack of clear visualization — users can't spot trends.
- ❖ Hard to forecast future spending or plan budgets.
- ❖ Unnoticed anomalies (sudden spikes) lead to surprise shortfalls.

# OBJECTIVES

1. To develop an intelligent system that tracks and analyzes user expenses automatically.
2. To apply machine learning algorithms for accurate prediction of future spending trends.
3. To provide visual insights through interactive charts and graphs for better financial understanding.
4. To assist users in creating personalized budgets based on their income and spending behavior.
5. To promote financial awareness and help users make informed and data-driven budgeting decisions.

# TECH STACK

- **Frontend:** React + Vite, Tailwind CSS, Framer Motion, Chart.js (for data visualization), Firebase SDK for auth / backend.
- **Backend:** Python + FastAPI for API server, Firebase Admin SDK for Firestore / Authentication integration.
- **Data & ML:** Uses scikit-learn for building ML models (Random Forest) for expense prediction & anomaly detection; uses Pandas & NumPy for data processing
- **Server:** Run via Uvicorn ASGI server.

## Architecture Overview

# MODULES

- **User Login:**  
Allows users to securely register and log in to access personalized expense data and forecasts.
- **Expense Entry:**  
Enables users to input and categorize daily expenses, forming the basis for analysis and forecasting.
- **Expense Analysis:**  
Analyzes spending habits through visual reports, helping users identify major expense areas and trends.

- **AI Forecasting:**  
Utilizes machine learning algorithms to predict future expenses based on historical data patterns.
- **Budget Recommendations:**  
Provides smart, personalized budgeting suggestions to help users control overspending and save efficiently.
- **Report Generation:**  
Generates detailed monthly or yearly reports summarizing spending, forecasts, and budget insights.

## Expense Predictions

Predicted Expense for Next Month

**₹13,503.26**

Based on your budget of ₹20000.0, we predict your next month's expense.

**How this works**

Our AI analyzes your spending patterns, current budget, and historical data to forecast your expenses for the upcoming month. This helps you plan better and stay within your limits.

## AI Insights & Suggestions

**Spending Insights**

You are spending a lot on Food (66% of total).

You are spending a lot on Transport (33% of total).

**Smart Suggestions**

Try to save 10% of your income.

Track your daily expenses.

# CUSTOMIZE YOUR BUDGET & DATA

## Settings

### Monthly Budget

Set your monthly budget limit (₹)

 Save Budget

### Import Data

Upload Expenses CSV

Click to upload or drag and drop

CSV format: date, category, amount, title

Import CSV

# DATA FLOW

1. Enter your monthly budget limit in the input field provided.
2. Click the “Save Budget” button to store your monthly budget settings.
3. Upload your expense data by dragging and dropping a CSV file into the upload area.
4. Ensure the CSV follows the required format: date, category, amount, and title.
5. Click the “Import CSV” button to process and store the uploaded expense data.

# **FUTURE ENHANCEMENTS**

- **Automatic bill tracking and reminders**
- **Integration with bank accounts and payment apps**
- **Advanced data visualization and custom dashboards**
- **Mobile app version with offline support**
- **Voice-enabled virtual assistant for financial queries**

# CONCLUSION

**BUDGETWISE AI BASED EXPENSE FORECASTING TOOL** provides an intelligent and user-friendly platform for managing personal finances by combining expense tracking, budgeting, predictive analytics, and data visualization. The system empowers users to gain better awareness of their spending habits, plan budgets effectively, and make informed financial decisions. With features such as AI-based predictions, anomaly detection, secure data handling, and CSV integration, BudgetWise goes beyond traditional finance tracking tools by offering actionable insights and automation. Although there are opportunities for future enhancements, the project demonstrates a strong foundation in full-stack development, machine learning, and UI design, showcasing its potential to evolve into a comprehensive financial management solution.

**THANK YOU!!**
